

RSW STRAINERS

RSW STRAINERS

RSW chillers are easily fouled or blocked up by scales, seaweed or just about anything else that can be brought through your seawater pump.

RSW strainers from Teknotherm can prevent fouling by stopping debris from ever reaching your chiller. Manufactured locally by Teknotherm, using hot dip galvanized steel and a patented 316L stainless steel basket with wedge wire, these strainers will help make your RSW system run smoothly and protect your investment at the same time.

The wedge wire design is superior to any other standard basket with mesh or perforated metal and is easily cleaned by simply back-flushing your strainer.
